DIGI XBEE® SENSOR

Digi XBee sensors easily integrate into ZigBee networks, featuring long battery life and small size for unobtrusive installation anywhere.

ZigBee technology enables low-cost, low-power networking of sensors, controllers and other devices in self-configuring, self-healing wireless mesh networks. Part of Digi’s XBee networking solutions, Digi XBee sensors offer the ability to provide real-time data from a variety of sensors (e.g., temperature, humidity, light) in a single solution for wireless communication across a ZigBee infrastructure.

Their small form factor and long battery life power make Digi XBee sensors easy to integrate with Digi’s XBee gateway solutions to provide reliable, unobtrusive communications. Applications include building automation and security, energy management, food storage management, freight/vehicle monitoring and many more.

Installation is a snap. Simply insert batteries, add the Digi XBee sensor to the ZigBee network, and configure the update interval. Next, mount the device in an out-of-the-way location and start communicating.

If using the same ZigBee protocol, Digi XBee sensors can be used with Digi XBee gateways, Digi XBee embedded modules, Digi XBee adapters or Digi XBee wall routers to drop-in end-to-end device networks – without the need for a wired network infrastructure.

*Range figure estimates are based on free-air terrain with limited sources of interference. Actual range will vary based on transmitting power, orientation of transmitter and receiver, height of transmitting antenna, height of receiving antenna, weather conditions, interference sources in the area, and terrain between receiver and transmitter, including indoor and outdoor structures such as walls, trees, buildings, hills, and mountains.*
