Description

The **SPX2431** is a 3-terminal adjustable shunt voltage regulator providing a highly accurate bandgap reference. The SPX2431 acts as an open-loop error amplifier with a 2.5V temperature compensation reference. The SPX2431’s thermal stability, wide operating current (100mA) and temperature range (0°C to 105°C) makes it suitable for a variety of applications that require a low cost, high performance solution. SPX2431A tolerance of 0.5% is proven to be sufficient to overcome all of the other errors in the system to virtually eliminate the need for trimming in the power supply manufacturer’s assembly lines and contribute a significant cost savings.

The output voltage may be adjusted to any value between $V_{\text{REF}}$ and 20 volts with two external resistors. In the standard shunt configuration, the combination of a low temperature coefficient, sharp turn on characteristics, low output impedance, and programmable output voltage makes this precision reference an excellent error amplifier. The SPX2431 is available in a SOT-23-3 package.

### FEATURES
- Trimmed bandgap to 0.5% and 1.0%
- Wide operating current 1mA to 100mA
- Extended temperature range: 0°C to 105°C
- Low temperature coefficient: 30 ppm/°C
- Offered in 3 Pin SOT-23 (M)
- Replacement for TL431, AS2431
- Low noise output

### APPLICATIONS
- Battery operating equipment
- Adjustable supplies
- Switching power supplies
- Error amplifiers
- Single supply amplifier
- Monitors / VCRs / TVs
- Personal computers

**Functional Block Diagram**
Absolute Maximum Ratings
NOTE: Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

- Cathode-Anode Reverse Breakdown $V_{KA}$: 20V
- Anode-Cathode Forward Current, (< 10ms) $I_{AK}$: 1A
- Operating Cathode Current $I_{KA}$: 100mA
- Reference Input Current $I_{REF}$: 1.0mA
- Continuous Power Dissipation at 25°C $P_D$: 200mW
- Junction Temperature $T_J$: 150°C
- Storage Temperature $T_{STG}$: -65°C to 150°C

Recommended Conditions
- Cathode Voltage $V_{KA}$: $V_{REF}$ to 20V
- Cathode Current $I_{K}$: 10mA

Typical Thermal Resistances
- SOT-23
  $\Theta_{JA}$: 575°C/W
  $\Theta_{JC}$: 150°C/W
- Typical Derating: 1.7mW/°C

Typical deratings of the thermal resistances are given for ambient temperature >25°C.

Electrical Characteristics
Electrical characteristics at 25°C, $I_K = 10mA$, $V_K = V_{REF}$, unless otherwise specified.

Calculating Average Temperature Coefficient (TC)

- TC in mV/°C = \( \frac{\Delta V_{\text{REF}}(\text{mV})}{\Delta T_A} \)
- TC in %/°C = \( \frac{\Delta V_{\text{REF}}}{\Delta V_{\text{REF at 25°C}}} \times 100 \)
- TC in ppm/°C = \( \frac{\Delta V_{\text{REF}}}{\Delta V_{\text{REF at 25°C}}} \times 10^6 \)
